

THUNDERBIRD[®]

by

BUTANE INSERT FITTING INSTRUCTIONS

Two simple steps to properly fit Thunderbird[®] Inserts into lighter cases.

Remove current insert and simply replace with a new Thunderbird[®] Insert. After replacing with the new insert, open & close the lid of your lighter repeatedly several times. If the lid is opening & closing properly, you are ready to use your lighter.

Trouble-shooting: If the lid is not opening & closing properly, adjust "**Lid Hinge Spring**" located inside the lid by slightly bending downward to make fit tighter or upward to make fit less tight. In most instances, the lid does not close all the way; thereby creating a gap between the lid and the casing. Be sure to bend the "**Lid Hinge Spring**" downward to fix this problem.

Note: Tighter fit means lid opens & closes with a feel of spring tension that enables the cap to open in one snap and to close without a gap between the lid and the casing.
